DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 2. Claims 1,8,9 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, applicant recites the base assembly module being interchangeable with a base assembly module whose circuitry is active and one whose circuitry is passive and it appears that applicant is intending to claim 3 distinct base assembly modules optionally interchangeable; yet in claim 8 applicant appears to repeat the active and passive circuitry of the optional (second and third) base assembly modules and since claim 8 is dependent on claim 1 it is unclear if the base assembly modules are additional to those recited in claim 1. The same applies to the base assembly modules recited in claim 9, which is also dependent on claim 1.
- 3. As best understood the following rejection applies.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

- 2. Claims 1,3-5,8,9,10-12,15 are rejected under 35 U.S.C. 102(e) as being anticipated by Worsdell et al (6,994,459).
- 3. With regards to claim 1 and applicant recites "the base module is interchangeable with a base assembly module whose electronic circuitry is active and a base assembly module whose electronic circuitry is passive", this recitation is considered to be functional language since the recitation only requires the capability to be interchangeable. Furthermore, as recited, it appears that the active and passive base assembly modules are optional elements not required by the instant invention since the base module is interchangeable as an option with the base modules of active and passive circuitry. Furthermore applicant has not disclosed how, with regards to structural limitations of the base assembly module, the base assembly module facilitates being interchangeable but only states that it is interchangeable. Finally, although applicant has stated that the device has a plurality of modular components and continues with referring to each component as modular, applicant has not disclosed any structural limitation with regards to the modular features of each modular device thus the term "modular" is considered to a matter of intended use of the components. As best understood the following rejection applies.
 - Worsdell discloses a mounting module (6) having one or more solid-state light sources (27), a cut-off shield module that limits the light emitted by the solid-state light sources according to predetermined angular cut-off parameters (9), and a base assembly module including electronic circuitry that electrically

Application/Control Number: 10/811,684

Art Unit: 2875

connects the solid-state light sources to a power source within the aircraft (5), wherein the modular components are configured so that the device is mountable within the wingtip of multiple types of aircraft without modifying the wingtip(col. 8 lines 8-15, Worsdell does not appear to modify the wingtip for installation of the device). With regards to the recitation of the base assembly module being interchangeable with a base assembly module whose electronic circuitry is active and a base assembly module whose electronic circuitry is passive and one that is active Worsdell discloses the light assembly as a replacement for existing lights on an aircraft or for fitting to a new aircraft and discloses base assembly 5 as providing a duct for routing electrical cables.

- A fastening mechanism configured to commonly fasten the mounting module to both the cut-off shield module and the wingtip (4, col. 8 lines 11-15, fig 3).
- The mounting module includes a heat sink (11,performs as a heat sink); a
 casting, wherein the heat sink comprises cooling fins incorporated in the casting
 of the mounting module (11,20, fig 4).
- With regards to claim 10, applicant discloses the components as modular but applicant has not disclosed any structural limitation with regards to the modular features of each modular device that would facilitate modular properties, thus the term "modular" is considered to be an intended use of the components. Worsdell discloses a plurality of modular components include a mounting module (6) having one or more solid state light sources (27), a cut off shield module that limits the light emitted by the solid state light sources according to predetermined

Application/Control Number: 10/811,684 Page 5

Art Unit: 2875

cut off parameters (9) and a base assembly module including electronic circuitry that electrically connects the solid state light source to a power source within the aircraft (5) wherein the modular components are configured so that the device is mountable within the wingtip of multiple types of aircraft without modifying the wingtip(4, col.8 lines 8-15 Worsdell does not appear to modify the wingtip for installation of the device).

With regards to claim 15, it appears that the lighting device 1 as a whole, including mounting module (6) is compatible with multiple types of aircraft allowing the device to be mounted to the mounting platform of an aircraft's wing without retrofitting the device (col. 8 lines 5-7) since Worsdell makes no mention of modifying the wingtip to accommodate the device.

Allowable Subject Matter

- 4. Claims 16-29 are allowed.
- 5. Claims 13-14 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. The following is a statement of reasons for the indication of allowable subject matter: The prior art cited does not disclose the following limitations: The configuration of the lighting device as recited in claims 16 and 17, a clearance hole in the base assembly module.
